VETERINARY SCIENCE CENTER/ JOHNSON TECHNICAL
INSTI

Type: ROUTINE INSPECTION
Date: 15-MAY-2018

2.31(e)(4)

INSTITUTIONAL ANIMAL CARE AND USE COMMITTEE (IACUC).

In the "Use of Canines in Veterinary Technology Courses/Labs" protocol, the procedures for the placement of a stomach tube, buccal mucosal bleeding time (BMBT), cystocentesis, and placing a male urinary catheter all reference the use of "anesthetized patients". However, in the anesthesia procedures listed in the protocol, they are only specified for pelvic radiographs, orchiectomies, ovariohysterectomies, and dentals.

In the "Use of Felines in Veterinary Technology Courses/Labs" protocol, the procedures for BMBT and cystocentesis also reference "anesthetized patients" but anesthesia procedures specified in this protocol are only for orchiectomies, ovariohysterectomies, and dentals.

A complete description of procedures designed to assure that discomfort and pain to the animals will be limited is to be included in proposals involving animals covered for research/teaching purposes. Not specifying these procedures can lead to inadequate/improper anesthesia being administered, which could result in pain or distress to the animals involved.

Correct by updating anesthesia procedures for animals who are to be anesthetized for for teaching purposes.
Correct by June 18, 2018.

This inspection and exit interview were conducted with the instructor of veterinary technology.
